In this way it is also designed to prevent damage and loss of fishing gear as far as possible.</p> <p>The following procedures should be adopted:</p> <ol style="list-style-type: none"> 1. Dredging and fishing vessels maintain listening watch on VHF Channel 16. 2. Masters of dredgers to call up on Channel 16 when approaching a dredging area at a range of 10 miles. They should give ETA in area and position of operation. 3. On hearing a dredging vessel's notification any fishing vessels in the area should respond giving their position and gear being worked. A VHF working channel should be established between the dredging vessel and fishing vessel(s). 4. Once communications have been established liaison can take place to allow time for the removal of fishing gear as may be necessary. Dredging should commence clear of fishing gear until it is removed. 5. Masters of fishing vessels approaching an area where a dredging vessel is operating should call up the vessel on VHF channel 16 to establish lines of communication. 6. Local fishing associations can be used to establish more formal communications, depending upon the area being worked, where direct communications between vessels is proving difficult. Advice on contacts can be sought from the nearest local MMO district fisheries office – Lowestoft (Tel: 01502 573149) or Grimsby (Tel: 01472 355112). 7. Dredging companies should also contact local fishing associations in advance, using the assistance of MMO district fisheries offices as necessary, when they are going to start dredging operations in areas that are seldom or irregularly dredged. Not less than 1 week's notice should be provided.
